The Process

We meet with you to discuss all the specific requirements for your App.

We prepare a basic mock-up of how the App might look and function.

When you decide to proceed, we sign the agreements and begin the full development of your app using your data and all the information that is required.

When completed, we support you to roll out your App and provide additional development and support as outlined in the service level agreement.

Pricing

Every App is custom built for the client to meet their individual requirements.

Pricing depends on the complexity of the App developed, data usage and so on.

We understand that businesses have to be responsive as their needs change and grow. This means that their App will need to also change and grow over time.

We do not charge to build the initial app but rather we work on a monthly charging model. Included in this monthly fee is:

- Facilitating any changes and updates to the App as needed;
- Technical support and problem-solving;
- All the fees connected with enabling the App to work (Data and storage requirements, security features and other considerations)
